--	---	--------------	---

For the collection, use the containers with preservative provided free of charge by the Blood Collection Centre upon presentation of a medical prescription.

The liquid in the bottles is poisonous: do not ingest. Avoid contact with skin or eyes. In case of contact, wash with running water. Keep out of reach of children.

Do not use laxatives, purgatives, or suppositories to evacuate.

- Collect bowel movement into a clean container.
- Open the container with the preservative liquid. **DO NOT remove the liquid from the container.**
- Use the special scoop attached to the lid to collect a small amount of stool (the size of a hazelnut) and transfer it to the container
- Close the container tightly by screwing the lid back on and mix.

Preferably collect from areas with blood or mucus. Do not contaminate with urine.

**DO NOT fill the container** completely and avoid soiling it externally.

**DO NOT open the cap at the bottom of the bottle for any reason.**

If the test is to be performed on 3 samples, collect the samples on different days.

Deliver the collected samples together, keeping them at room temperature or in the refrigerator at 2-8°C (do not freeze).
