the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996).

There are a number of reasons why the world's population is becoming more undernourished. First, the world's population is growing rapidly. The world population is projected to increase from 5.5 billion in 1990 to 8 billion in 2025 (United Nations 1994). This increase in population will place a greater demand on the world's food resources.

Second, the world's food resources are being depleted. The world's forests are being cleared at a rapid rate for agriculture and other uses. This loss of forests is reducing the world's capacity to produce food. The world's fisheries are also being depleted, and this is reducing the world's capacity to produce food.

Third, the world's food resources are being distributed unevenly. The world's food resources are concentrated in a few countries, and these countries are not always able to provide food for their own populations. This uneven distribution of food resources is contributing to the world's food crisis.

There are a number of ways in which the world's food crisis can be addressed. First, the world's food resources can be protected. This can be done by protecting the world's forests and fisheries. Second, the world's food resources can be distributed more evenly. This can be done by increasing the world's food production and by improving the world's food distribution system.

Third, the world's food resources can be used more efficiently. This can be done by reducing the world's food waste and by improving the world's food production and distribution system. These steps are essential if the world's food crisis is to be addressed.

The world's food crisis is a serious problem that must be addressed. The world's food resources are being depleted, and the world's food resources are being distributed unevenly. These factors are contributing to the world's food crisis. There are a number of ways in which the world's food crisis can be addressed, and these steps are essential if the world's food crisis is to be addressed.
